

ABSTRACT

A disk changer includes a plurality of accommodating means 2a, 2b, and 2c that hold disks 3a, 3b, and 3c, a selecting unit that selects one of the accommodating means, 5 a loading mechanism 40 that loads a disk held by an accommodating means selected by the selecting unit, a disk processing unit 50 that reproduces from or records in a disk loaded by the loading mechanism, and a lock mechanism 60 that locks movement of a disk that has not been selected 10 by the selecting unit, so that the accommodating means can be fixed during transportation and an operation of the disk changer.
